

Secure Virtual Desktops

The next-generation virtual desktop that helps you achieve a Zero-Trust security posture.

According to an Ipsos survey for the World Economic Forum, 72 percent of respondents predict that hybrid learning models will be the norm by 2025. To stay ahead of the curve, higher education institutions need to enlist remote-access teaching and learning tools. But how do IT professionals provide virtualized learning environments to faculty and students without compromising security or user experience?

The Apporto Difference

Unlike alternative approaches, such as DaaS or VDI, Apporto's secure virtual desktops safely deliver data, apps, and tools in the browser via HTML events and messages, so there's no need to worry about the security posture of the endpoint device.

What's more, our solution was specifically **built for the unique needs of the higher education community**. Apporto secure virtual desktops give faculty and students the reliability and flexibility they want while providing IT with the ease of management and security they need.

Built around the core Zero Trust concept of "Trust no one and always verify," our virtual desktops ensure everyone both inside and outside of an organization is authorized before any interaction with network applications or data occurs. Plus, with Apporto's secure virtual desktops, sensitive data is stored in the cloud instead of on vulnerable endpoint devices.

Benefits:

- **A Responsive and Powerful User Experience On and Off Campus:** Users have a seamless experience anywhere and at any time inside the virtual desktop, providing excellent sound and video conferencing, as well as supporting demanding 3D applications.
- **High Performance at an Unbeatable Price:** No upfront investment, no systems integrators, no implementation, and no consulting fees...everything is already included in a predictable, monthly price. Plus, Apporto uses advanced auto-scaling and optimization algorithms to keep costs low.
- **No Technical Expertise Required:** Faculty and students access tools and applications through an easy-to-use portal on the device of their choice

- **Reduce Administrative Burden:** IT no longer has to spend time maintaining, patching, upgrading, or scaling infrastructure resources. Apporto manages all of that for you, so your administrators can focus on other priorities.
- **Boost Student Productivity:** Slow applications are frustrating and make it hard for students working remotely to complete their projects. Apporto addresses high network latency by utilizing a unique geo-optimizing technology that connects users to the closest data center, ensuring low latency and high productivity.
- **Increase Organizational Agility:** Deploy in days with no expensive consultants required. Support new geographies in no time. Scale up and down as needed.
